

TECHNOLOGY LEADERSHIP PORTFOLIO

Herry Herdianto

CTO | Technology Consultant | Full-Stack & Backend Engineer

I help startups and growing organizations turn complex business needs into scalable products, clearer architecture, and faster delivery.

PROFILE

Technology leadership that stays hands-on

A blend of architecture, product judgment, execution, and team development.

Technology leader and software engineer with more than two decades of experience building web applications, enterprise systems, and digital products. I work across strategy and execution: clarifying what should be built, shaping the architecture, guiding delivery, and contributing hands-on when the product needs it.

POSITIONING

Fractional CTO and Technology Advisor

Helping teams accelerate MVP delivery, improve architecture decisions, and build systems that can scale.

Core consulting strengths

- Technology strategy and architecture planning.
- MVP scoping, delivery acceleration, and pragmatic technology selection.
- Scalable web applications and microservices-based platforms.
- Product R&D, technical leadership, and engineering coaching.

Technology foundation

Java, Python, PHP, JavaScript, Kotlin, Django, Laravel, Node.js, React, Vue.js, PostgreSQL, MySQL, Elasticsearch, ELK Stack, Docker, Linux, and Git.

SELECTED WORK

Four platforms, four business problems

Each case study shows how product, architecture, data, and operational priorities were brought together.

Platform	Role	Business focus	Proof point
RVARE	CTO	AI crisis and reputation intelligence	MVP delivered in three months
Petruck.id	Technology Consultant	AI-enabled logistics operations	Launch plan reduced from six months to six weeks
Mebiso	CTO	AI-assisted brand analysis and monitoring	Unified product direction and scalable services
FNI	Technology Lead	Commerce and member operations	High-availability, scalable product development

How to read this portfolio

The screenshots are product evidence, not standalone design samples. Each is paired with the business challenge, my role, the technical approach, and the capability it demonstrates. Work was completed as part of my role with the respective organization.

PORTFOLIO LENS

Architecture + Product + Execution

The recurring pattern is converting ambiguity into a working, understandable, and scalable product.

CASE STUDY 01

RVARE

AI-powered crisis and reputation intelligence for communication teams.

ROLE Chief Technology Officer **PERIOD** August 2025 - Present **STACK** React, Django, PostgreSQL

DELIVERY PROOF

MVP delivered in two months

Technology vision, product architecture, and hands-on implementation were aligned around a focused first release.

The challenge

Organizations need to detect emerging reputation issues across fragmented digital channels, but raw post volume alone does not provide the context required for timely decisions.

My contribution

Defined the technology direction and platform architecture, translated monitoring needs into product capabilities, and led the hands-on development of the MVP. The product consolidates volume, engagement, source, and sentiment signals into an executive-ready analysis surface.

RVARE topic analytics: volume, sentiment, engagement, and source distribution in one decision view.

CASE STUDY 01 - PRODUCT EVIDENCE

From monitoring data to comparative intelligence

RVARE: turning product capability into an operational decision surface.

RVARE comparison view: topics evaluated across sentiment, volume, engagement, source diversity, and keywords.

Capabilities demonstrated

- Cross-topic comparison using normalized dimensions that make uneven datasets easier to interpret.
- A modular product structure designed to accommodate additional sources, analyses, and reporting needs.
- Visual prioritization that supports communication and leadership teams during issue assessment.

CONSULTING RELEVANCE

I can help teams define monitoring products, data-backed decision workflows, and architecture that evolves with new sources and use cases.

A concrete example of how I connect architecture, product priorities, and business outcomes.

CASE STUDY 02

Petruck.id

Operational intelligence for logistics, fleet performance, and trip economics.

ROLE Technology Consultant **PERIOD** March 2026 - Present **STACK** Node.js, React, PostgreSQL

ACCELERATION PROOF

Three months reduced to a six-week launch plan

Architecture and delivery priorities were reworked around the shortest path to a valuable operational release.

The challenge

Logistics operators need more than trip records. They need a unified view of revenue, cost, margin, utilization, capacity, and operational exceptions without slowing day-to-day execution.

My contribution

Provided architecture planning, solution design, and implementation guidance. Simplified the delivery approach, prioritized the core operating model, and aligned technical decisions with launch requirements and future scalability.

Petruck trip economics: margin, revenue, operating cost, and trend visibility within the trip workflow.

CASE STUDY 02 - PRODUCT EVIDENCE

Turning fleet activity into operational decisions

Petruck.id: turning product capability into an operational decision surface.

Petruck fleet assessment: capacity, utilization, achieved trip targets, and an operational health score.

Capabilities demonstrated

- Operational formulas that connect available fleet capacity with daily trip targets.
- Automated interpretation of utilization and target achievement, not just passive reporting.
- A combined workflow for tickets, mobile access, imports, exports, and operating expenses.

CONSULTING RELEVANCE

I can help founders and operational teams identify the minimum data model, architecture, and release scope needed to move from process complexity to a usable product.

A concrete example of how I connect architecture, product priorities, and business outcomes.

CASE STUDY 03

Mebiso

AI-assisted brand analysis, monitoring, and image protection in one service platform.

ROLE Chief Technology Officer **PERIOD** July 2022 - March 2024 **STACK** Laravel, Elasticsearch, ELK Stack, Microservices

PRODUCT LEADERSHIP

Unified brand services into a scalable digital platform

Technical direction, product R&D, full-stack execution, and project leadership were managed as one product discipline.

The challenge

Brand owners need complex trademark and monitoring services to feel simple, accessible, and actionable. The product must connect analysis, service ordering, status, learning, and ongoing protection without overwhelming the user.

My contribution

Led technology strategy and product development while remaining hands-on in full-stack engineering. Directed product research, shaped the service architecture, led project delivery, and coached interns through real product work.

Mebiso service dashboard: AI-assisted brand analysis, brand monitoring, and image protection.

CASE STUDY 03 - PRODUCT EVIDENCE

Making a complex brand-analysis process understandable

Mebiso: turning product capability into an operational decision surface.

Mebiso analysis history: class filters, processing states, payment states, and access to analysis documents.

Capabilities demonstrated

- A service lifecycle that makes analysis, payment, processing, and result access visible to users.
- Search and status patterns that support repeated analyses across trademark classes.
- A scalable search and observability foundation suited to brand-monitoring workloads.
- Reduced data retrieval time from nearly nine to 20 seconds to tens of milliseconds while improving analysis accuracy by approximately 60%.

CONSULTING RELEVANCE

I can help service businesses productize expert workflows, simplify complex customer journeys, and align backend capability with a clear client-facing experience.

A concrete example of how I connect architecture, product priorities, and business outcomes.

CASE STUDY 04

FNI

Commerce, transaction, and member operations across administrative and user-facing workflows.

ROLE Technology Lead **PERIOD** February 2025 - March 2026 **STACK** Full-Stack Web Application, Reporting, High-Availability Architecture

PLATFORM SCOPE

One operating surface for products, orders, users, transactions, and rewards

Product R&D and full-stack delivery focused on a platform that can support growing operational complexity.

The challenge

A commerce and membership organization must coordinate product administration, orders, registration, account activity, transaction reporting, bonuses, withdrawals, and customer support within a coherent operating model.

My contribution

Led full-stack development and product R&D, translated operational requirements into product modules, and developed the platform with high-availability and scalability requirements in mind.

FNI administrative analytics: transaction movements, activity reporting, and platform-management modules.

CASE STUDY 04 - PRODUCT EVIDENCE

Connecting member progression with platform operations

FNI: turning product capability into an operational decision surface.

The screenshot displays the FNI member dashboard. On the left is a sidebar menu with options: BERANDA, Menu Utama, PROFILE SETTING (Pengaturan Profil, Change Login Password, Change Security Password, Request Security Password, Unggah Kartu Pajak Anda (NPWP)), REGISTRATION (New Registration, Upgrade Member, Redeem Product), and Business Tools. The main content area is divided into two sections:

- Annual Leadership Rank** (Period: 2025-12-12 ~ 2026-12-12):
 - Visual: A banner showing a ship with text "NO RANK! Elvis Billy You haven't achieved annual rank for this period" and "BONUS PROMO WARRIOR Pinnisi Cruise Dinner".
 - Table:

Total Reward	: 0.0
Total Pairs	: 1 (Vol FPV F1)
Pairing Needed for the Next Rank	: 4
Next Target Bonus	: Warrior 5
Status	: Active
Last Update	: 2026-08-18
- Bonus Tahunan** (Period: 2025-12-12 ~ 2026-12-12):
 - Visual: A banner showing a treasure chest with text "ANNUAL REWARD MASTER Rp. 30.000.000 400 PAIR".
 - Table:

Total Reward	: 0.0
Total Pairs	: 1 (Vol FPV F1)
Pairing Needed for the Next Rank	: 98
Next Target Bonus	: Elite
Status	: Active
Last Update	: 2026-08-18

FNI member experience: annual rank, pairing progress, reward targets, and account operations.

Capabilities demonstrated

- Separate but connected administrative and member-facing experiences.
- Reporting for transactions and user activity alongside operational management modules.
- Progression, reward, registration, product, and account workflows within one platform ecosystem.

CONSULTING RELEVANCE

I can help organizations map complex operational rules into modular products, define scalable system boundaries, and create reporting that supports both administrators and end users.

A concrete example of how I connect architecture, product priorities, and business outcomes.

ADVISORY SERVICES

Ways I can help

Focused engagements for founders, product owners, and engineering teams.

Architecture Review

Evaluate system boundaries, data flows, scalability risks, and pragmatic improvement priorities.

MVP Planning

Turn a business idea into a focused release scope, delivery sequence, and technology plan.

Fractional CTO Advisory

Provide ongoing technology direction without the overhead of a full-time executive role.

Product & Engineering Diagnostic

Identify why delivery is slow, where complexity is accumulating, and what the team should address first.

Education

Master's Degree in Financial Management | STIE Malangkececwara

Bachelor's Degree in Mathematics and Computer Science | Universitas Gadjah Mada
